

# Driver KNX for mControl

mControl is a software for your digital home and with this KNX driver it can be used to control functions in your KNX system from any PC containing Windows Media Center.

General view of mControl in Windows Vista

**Take full advantage of your smart system  
with Driver KNX.  
Discover the way to smart living.**

Driver KNX is...

- easy to use - access to all functions in Media Center
- easy to expand - add new controls easily
- easy to learn - no other software knowledge is needed

## Functions and possibilities

With Driver KNX and mControl Media Center System you can control most of the functions installed in your KNX system. Via the friendly user interface it is easy to add and control KNX functions.

The current release supports switching and dimming. In future releases there will be support for more control types.

## Supported interfaces

Driver KNX can access the KNX system via RS232, USB or IP interface. The user can easily change the interface from time to time.

All interfaces (RS232, USB and IP) that are certified by KNX Association and marked with the KNX logo are supported.

Example of supported interfaces:

- Siemens, IP Interface N 148/21
- Henzel, KNX-IP-Gateway
- Schneider, IP Interface
- Siemens, RS232 Interface N 148/04

## Requirements

Driver KNX for mControl works on any PC that has:

- mControl installed (see [www.embeddedautomation.com](http://www.embeddedautomation.com))
- access to KNX system from the PC via RS232, USB or IP interface
  
- Windows XP Media Center Edition or Windows Vista with Media Center
- 1 GHz CPU (1,5 GHz CPU recommended)
- 256 MB RAM (512 MB RAM recommended)
- 500 MB free disk space
